Pull Requests

For all cases, you should have your own fork of the repo.

To submit a pull request for a **new feature**:

1. Run the tests. Every pull request for a new feature should have an accompanying unit test and docs changes. See the *README.md* in the *tests/* and *docs/* directories for details.
2. Create a new branch off of the *master* branch for your feature. This is particularly helpful when you want to submit multiple pull requests.
3. Add a test (or multiple tests) for your feature. Again, see *tests/README.md*.
4. Add your new feature, making the test pass.
5. Push to your fork and submit the pull request!

To submit a **bug fix**:

1. Create a new branch off of the *master* branch.
2. Add a test that demonstrates the bug.
3. Make the test pass.
4. Push to your fork and submit the pull request!

To submit a **documentation fix**:

1. Create a new branch off of the *master* branch.
2. Add your documentation fixes (no tests required).
3. Push to your fork and submit the pull request!
